DIGITAL PLANET COMMUNICATIONS, INC. HELPS COMPANIES TAKE ADVANTAGE OF SIGNIFICANT TAX-BREAKS FOR NEW TECHNOLOGY

*Digital Planet Communications, Inc.
Educates Customers on Powerful
Stimulus Plan*

St. Paul, MN — November 29, 2011 — Digital Planet Communications, Inc., a leading provider in unified communications, announced today that the company is helping customers take advantage of a large tax-break for small to mid-sized businesses with Internal Revenue Code (IRC) Section 179. The tax benefit targets businesses who are contemplating large equipment purchases, such as technology, and significantly reduces the cost of purchasing such equipment. Section 179 allows business owners to write-off the entire cost, up to \$500,000, on new equipment purchases made by December 31st, 2011.

Many Americans were left wondering how the Stimulus Package would have an impact on their lives and Section 179 has answered that question for many business owners. Creating significant savings on major purchases of equipment, software or phone systems, the federal government has enacted

this bill in an effort to spur business-to-business spending. Right now businesses can expense the entire purchase price of qualifying equipment/software/phone systems in the first year up to \$500,000 (to be reduced to \$125,000 at the end of the 2011 tax year). Also slated to expire at the end of the 2011 tax year is the 100% Bonus Depreciation, which will drop down to 50 percent. For example, assuming you're in a 35% tax bracket, a \$45,000 purchase would drop dramatically, and would cost approximately \$29,250 after Section 179 has been applied to the transaction. In a transaction like this, Section 179 would yield a total savings of \$15,750. While every transaction is different and tax professionals should be consulted on specific situations, the potential rewards of this government program has persuaded many business owners to seriously consider investing in new equipment before year-end.

The one caveat associated with this powerful program is that the new equipment must be in use by December 31, 2011 in order to qualify for the massive

savings. This year, Section 179 also extends to cover software purchases in addition to traditional equipment. Many business owners have installed new business phone systems as a result of this addition to the tax code, because recent breakthroughs in telecommunications are enabling businesses to collaborate better, faster and more efficiently with one another.

“We were stunned to find out that so many of our customers had not yet heard of Section 179,” commented Shawn Schmidt, President of Digital Planet Communications, Inc.. “We may specialize in delivering technology solutions to our customers, but we treat our customers like partners. If we find something as powerful as this we have always considered it to be our duty to communicate this information to our customers. Our goal is to introduce our customers to technology that increases their productivity, but more importantly increases their profitability. When an opportunity like this comes along, we're thrilled to skip

discussions regarding technology, and go straight to the part where our customers get to enjoy increased profitability. That's why we're different and we plan on continuing to treat our customers like gold."

ABOUT DIGITAL PLANET COMMUNICATIONS, INC.

In 1992, St. Paul, Minnesota became home to Digital Planet Communications, Inc. Since

then the company has been working with small to medium sized businesses to develop Comprehensive Business Communications Solutions on a local and national level. Digital Planet Communications breadth of skills and resources enables its highly skilled team of professionals to deliver a "Total Care" solution for any organization's communication needs. Unlike other companies in the industry, Digital Planet is

able to provide multiple options for network services and leading equipment solutions. With technical expertise and unmatched quality of service, Digital Planet Communications has quickly become a leader in the rapidly changing unified communications industry.
